

**Strong Power: Perkins Engine**

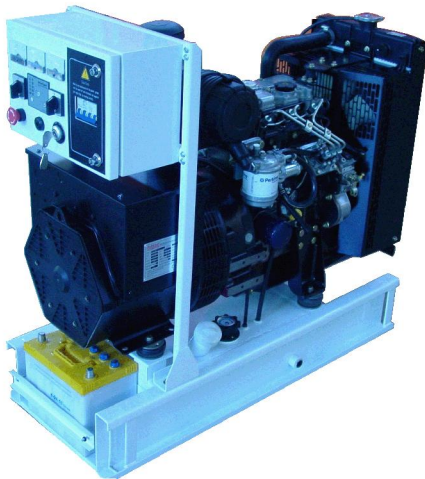

Perkins diesel engine are used widely in the communication, industry, outdoor projects, mining, ministry fields with wide power range, excellent durability & reliability and service life, low operation cost and fast speed return cycle.

**High-Performance Alternator--Stamford Alternator**

UK Stamford alternator has protecting ability when operating in severe environment with its 4-pole brushless self-excited type & insulation class H & IP23 protection class. Equipped AVR can protect the off-loading of engine automatically. 2/3 pitch winding stator can restrain wave distortion of output voltage effectively and reduce the heat from magnetic field.

**Intelligent Control System**

Integrated digital, intelligent, information, Controller automatically crank/stop the generator. Controller has the features of auto start/Stop, Timely inspection, data measurement and Alarming protection. Also it can start and stop the generator automatically by remote or direct mains signal.
